Nutrient Powerhouse - Modified Myers Cocktail

A Myers cocktail (modified for Hammond Hydration) is an intravenous Micronutrient therapy named after the late John Myers M.D, a physician from Baltimore Maryland. There are many suggested benefits but this is not fully known. It is thought that Myers cocktail can help with DNA repair and health support, improve energy levels and mood, improve cognitive function, anti-ageing support, improve post workout recovery, reduce neurodegeneration, and reduce inflammation.

Vitamin C and Glutathione

Antioxidant for your body! Vitamin C and Glutathione are both anti-oxidants in the human body, essential for many functions. Together it is thought that they combat free radicals which are responsible for cell death and reduced immunity. Glutathione is thought to detox multiple organs including liver, heart and others. There are studies into Vitamin C infusion for cancer sufferers and even Covid 19.

NAD+ with Vitamin C

NAD+ is found in every cell in the body and is involved in energy metabolism. It is a vital component in the body and there are studies to indicate that the numbers of this co-enzyme decline as we age. There is research to suggest that NAD+ can benefit mental clarity, memory, improve mood, improve metabolism and weight loss, improve skin, slow ageing, reduce fatigue and inflammation.

Super Pep

The ultimate infusion of B Complex, Vitamin C, Glutathione and Zinc. This infusion was created to support the immune system during times of illness, and reduce the onset and severity of colds, flu and other respiratory viruses. It is ideal for travellers pre or post flight and recovery from late nights in the office or entertaining. The purpose of super pep is to support healthy cell function, and remove toxins that contribute to skin, hair and nail damage, giving them a chance to regrow and renew.
